WORK EXPERIENCE

Founder & Mixed Reality Software Engineer

Omni Applications LLC - LucidDreams S.A.S

April 2017 - Present, United States - Colombia

- In charge of providing Extended Reality solutions across diverse sectors, including Virtual Reality tours, social media filters, game development, and software experiences with dynamic environments.
- Provided consultation has resulted in a notable 20-40% surge in customer engagement for our clients.
- UX design and collaborative version control is prioritized by using Dependency Injection and Reactive Programming while communicating actively through Slack and Git. Regularly develop on VIVE and Oculus devices.
- Ensure swift adoption of devices like Oculus Quest for VR, VARJO for XR and iOS or Android for AR to maintain a competitive edge.

XR Developer

The University of British Columbia

December 2018 - July 2021, Vancouver, Canada

- Delivered impactful sessions at the BC Tech Summit, engaging around 2000+ industry partners in the assessment of Augmented Reality experiences, including the notable project "The HoloBrain" in collaboration with the Emerging Media Lab and Microsoft Garage.
- Played a pivotal role within THE HIVE Laboratory, driving projects like MR Manikin / OCS and overseeing their Virtual Reality integration in Unity 3D Engine as a developer.
- Utilized advanced 3D graphics and VR / AR / MR toolkits to develop seamless and interactive Mixed Reality experiences. Used by almost 100 neuroanatomy students on UBC courses.

Research Frontend Developer

Purdue University

August 2018 - December 2018, Indiana, United States

- Proposed a robust software solution anchored in HTML, AWS, and strong front-end engineering principles, customized for the unique requirements of civil engineers and architects. The software was built on Javascript libraries and good web design principles.

EDUCATION

ERASMUS MUNDUS JAPAN - MEng, Lighting and XR | MSc in Optics, Image, Computer Vision and Multimedia | Msc of Computer Science

Toyohashi University of Technology | Universite Jean-Monnet | University of Eastern Finland

- Recipient of eight notable academic excellence distinctions and awards. • Japan | France | Finland • 2023

Systems and Computer Engineering

Minor in Software Engineering • Universidad Nacional de Colombia • Best High School Graduates Full Scholarship • 2019

PROJECTS

MRI-Derived Brain Volumetric Rendering on HoloLens

Microsoft Garage - The University of British Columbia • December 2018 - July 2021

- Engineered a C++ shader-based methodology to transform Blender created MRI brain scans into volumetric 3D visualizations on the HoloLens, seamlessly integrating principles of 3d Math, Linear Algebra, Computer Graphics, and GLSL. Unity used for UX design.

MR. Manikin, Vuforia-Enabled Mobile Clinical Simulation

The University of British Columbia • January 2020 - December 2020

- Employed augmented reality to give life to Annie, the mannequin that would teach students how to perform PCR and other medical techniques. Made use of ARCore and ARKit for mobile development, Photon for synchronous multiplayer, and harnessed Slack, Jira and Git for the game design phase, facilitating effective collaboration among a team of 10+ individuals.

CERTIFICATIONS & SKILLS

Certifications: Meta Augmented Reality Developer Professional Certificate | Meta Spark Creator AR Certification | Unity and C# Proficiency | AR games using Vuforia SDK | User Experience & Interaction Design for AR/VR/MR/XR

Languages: English, French, Japanese, Spanish
