Profile

Extended Realities student with background in Systems and Computer engineering with over 7 years of research and work experience, focused in computer graphics and new immersive technologies.

Relevant Skills

Computer Graphics

AR/VR Development

Machine Learning

Awards and Recognitions

- 6 Awards for academic and research excellence
- Trained in 3 different research groups from top universities
- ERASMUS program student
- Founder of 2 companies

Currently studying

ERASMUS JMD - Master of Imaging and Light in Extended Realities.
MSc Optics, Image, Computer Vision and Multimedia

Objective

To work in projects and technologies that reflect the concepts I studied throughout my master's, and to experience research and industrial work first hand to learn the best way to apply them.

Summary of Experience

Developer on the AR/VR field
Experience in Computer Graphics and Photonics
Research in multiple groups across USA, Canada and Colombia
Multiple Awards and Recognitions for high academic performance

Experience

Lead XR Developer // Jan 2019 - Aug 2021

Hackspace for Innovation and Visualization in Education (The Hive)
The University of British Columbia, Vancouver, Canada

Developed two mixed reality experiences that are currently being used by medicine students to learn about the brain through HoloLens1&2 (HoloBrain 3.0), and to practice clinical skills through a smartphone based simulation (Mr. Manikin / OCS).

Main Developer and Research Engineer // Feb 2017 - Sept 2019

Pontifical Xavierian University

Built a simulation for industrial engineers to understand the Material Requirements Planning. The faculty uses this software to teach students how to take correct business decisions, based on the results of the model.

Front-end Lead Developer // June 2018 - Dec 2018

Purdue University

Proposed the first iteration of an HTML and AWS based software that was able to find the best way to build an energy efficient building based on the components chosen by a civil engineer or architect. Only open data was used for energy calculations.

Research Training

The Hive Research Lab @UBC (Canada) // Jan 2019 - Apr 2021

Created the state of the art of the HoloBrain research project. The paper will be published in conjunction with Microsoft

Ironhacks Research Fellowship @Purdue (US) // Aug 2018 - Dec 2018

Ran a research based hackathon between universities which studied how participants could solve a problem by using Open Data and D3.js.

JavaScript

Python + libraries

Education

MSc in Optics, Image, Computer Vision and Multimedia - ERASMUS

University Jean-Monnet, France (2021 - 2023)

Master of Science in Computer Science - ERASMUS

University of Eastern Finland, Finland (2021 - 2023)

Master of Engineering - ERASMUS

Toyohashi University of Technology, Japan (2021 - 2023)

Software Engineering / Systems and Computer Engineering

National University of Colombia, Colombia (2013 - 2019)

Honors and Awards

MANUTECH SLEIGHT Scholarship and Certificate

University of Jean Monnet, France (2022)

Erasmus Mundus Mobility Award

University of Eastern Finland, Finland (2022)

Erasmus Mundus - IMLEX Consortium Full Tuition Scholarship

University of Eastern Finland, University of Jean Monnet, Toyohashi University (2021)

Visiting International Research Scholar Fellowship

The University Of British Columbia (2019 - 2020)

Emerging Leaders of the Americas Program Research Scholarship

The Government of Canada (2019)

Purdue - UNAL IronHacks Research Fellowship

Purdue University (2018)

Best Highschool Graduates from Colombia Full Scholarship

National University of Colombia (2013)
